## About wkuwacz

Wkuwacz is a free program that enable easy learning of words and can be used for any language. Basic advantage of this program is very easy in use editor. Editor enable you to create your own word-sets.

This program will work on PocketPC or desktop computers with Windows operating system

Microsoft .NET Framework or Compact Framework is required !!!

## Installation

### Desktop PC (WinXP, Win2003)

Simply unzip wkuwacz.zip file and run wkuwacz.exe. You don't need any installer.

If you downloaded installer you have to unzip files and run Setup.exe. Then follow instruction on the screen.

If something doesn't work you probably need Microsoft .NET Framework. You can download it here - <http://www.microsoft.com/downloads/details.aspx?FamilyID=262d25e3-f589-4842-8157-034d1e7cf3a3&displaylang=en>

## Pocket PC

Simply unzip *wkuwacz.zip* file and copy whole unzipped directory into your Pocket PC device (main memory or CF/SD card). Then you have to move *Sets* directory (that is inside *Wkuwacz* directory). *Sets* directory have to be placed directly in *MyDocuments* directory or CF/SD card (not inside another directory).

In order to run this program you need .NET Compact Framework. You can download it here - <http://www.microsoft.com/downloads/details.aspx?FamilyID=a5a02311-194b-4c00-b445-f92bec03032f&displaylang=en>

## How to create new set

Choose *File --> Open editor* from menu to open *Sets* editor.

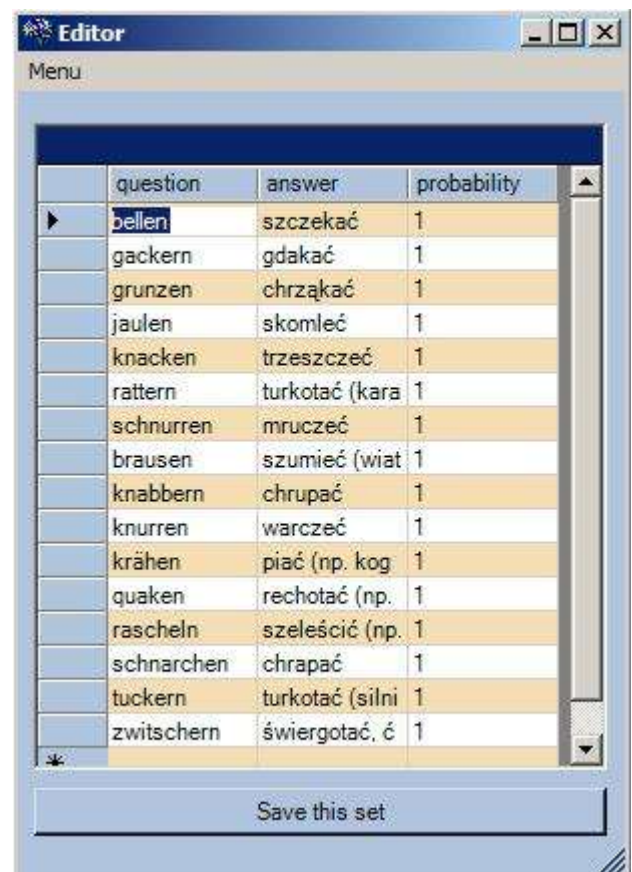

Editor enable you to create word-sets. During word typing you should specify parameters like: question (program will give this string as a question), answer (given answer) and probability (you can left it free)

Provability enable you to specify how often the word should appear at the beginning (but after some time more important are answers given by user). The program will give first questions that have the biggest probability value.

Editor has very helpful function Cross-fill (available in menu). This function enable you to automaticly reverse answers and questions.

While editing sets with Pocket PC you need to choose options from menu "Edit" (in Editor).

## Sets naming

e.g. *pl\_eng\_phrasal\_verbs*

pl : mean language (pl:polish) for which this set was created.  
eng : second language in set  
phrasal\_verbs : name of this set

General: *FL\_SL\_Name [ \_adv/simple ] [ \_number ] [ \_cross ]*

FL : first language for which this set was created  
(pl: Polish, eng: English, de: Deutsch etc.)  
SL : second language  
Name : name of the set  
adv/... : [optional] indicate if this set is simple (for beginner) or adv'anced (for advanced users)  
number : [optional] may indicate number of set (for example we have 5 advanced sets for phrasal verbs and every of these sets contains another words)  
cross : [optional] this set contain bidirectional translation ( eg. from English to Polish and from Polish to English). Cross fill function has been used to create this set.

For example *de\_eng\_irregularVerbs\_adv\_2\_cross* mean second advanced bidirectional set of irregular verbs designed for german (de) language with translation to english (eng).

Usually simple set should have around 10-20 words and advanced set between 15 and 30 words.

## Useful options

### Font size

You can change font size (From menu: Options --> Letter Size). It is very useful option.

While using Wkuwacz on Pocket PC you probably won't change default letter size. But while using Wkuwacz on desktop computer I recommend to maximize Wkuwacz's main window and Letter Size. After that you can lie in bed and learning- text will be easily visible anyway.

2-5m  
↔  
(with max font size)
